Tonawanda Coke, NY: On 10/20, facility closure operations (coke oven gas sphere purging and flaring) were completed. Air monitoring continued for a 24-hour cycle after flaring ended. No exceedances above background have been observed in the 6 air monitoring stations, or in any of the confirmatory laboratory samples. The air monitoring network has been shut down until it is needed when intrusive activities start onsite. We also took wastewater samples on 10/22-23, which are currently being analyzed. EPA will now be carrying out a thorough environmental assessment of the facility. We have reason to believe that addressing environmental concerns may be costly.

Chemours/Deepwater, NJ: The results from the sampling for GenX of the Penns Grove public water system have been received. All samples (production wells and post-GAC system samples) were non-detect at the reporting limit of 4 ppt.

Discussions with water technology company related to PFAS treatment, October 19 - ORD participated in a call with representatives from [Evoqua Water Technologies](#) to discuss collaboration opportunities on treatment systems for PFAS. Evoqua is interested in engaging with EPA to share drinking water treatment data, test air emissions at sites where their treatment systems are operating, and evaluate the efficiencies and releases from their granular activated carbon reactivation efforts.
